

HAWKER®

Headlines Winter 2026 edition

Quick Tips!

Curious about the proper sequence to connect and disconnect lead-acid batteries that are in different configurations like series, parallel, series-parallel, & series-parallel with a 12-volt tap? Well, we've got you covered! **Just download the PDF at <https://hawkerbattery.com/resources/#faq>**

Answer to question from last issue:

I've heard that there's a Hawker® Lithium-Ion (6TLI) battery, is that true?

Yes, it's **TRUE!** We call it the **Hawker® ARMASAFE™ iON-X™ 6TLI** battery. It's a nominal 24-volt battery with 1100 CCAs and 90 Ah.

Currently, it's undergoing qualification testing IAW **MIL-PRF 32565C**.

If you're a battery aficionado (aka, nerd) this battery is a Type 2-B90: Type 2 meaning the Hazard Severity Level is ≤ 6 (per SAE J2464), B = high power...that's 1100 CCAs at 0°F (-18°C)...and 90 = 90Ah.

Now, if you're super-nerdy, see TABLE I. "Physical and Electrical Requirements" on page 10 of the MIL-PRF for more detailed specs.

For you battery-friendly (but not battery nerdy) folks, what does this mean compared to our Hawker® ARMASAFE™ Plus 6TAGM battery? Well, the **ARMASAFE™ iON-X™ 6TLI** has **2X** the voltage, **over 2X** the energy (watt-hours), can provide **8.3 times** more deep cycles (that's 1000 or more), and weighs **25% less**...at only 66lbs (30 kg).

Stay tuned for more details and a 6TLI webpage at hawkerbattery.com.

Did you know:

an individual Hawker® ARMASAFE™ Plus 6TAGM battery can be lifted by its **integrated carrying handles** while it's still in the shipping box? The openings in the box top allow fingers to be slid through and down to reach the battery's built-in handles. **Never use just the open slots** of the cardboard shipping box to lift and/or carry the battery as they are not designed for that purpose.

Training:

So far in 2026 Hawker® FSRs have provided free onsite **Battery Maintenance and Recovery Training** at over **70** motor-pools across the Army, Marines, Army Reserve, and the National Guard!

We're currently scheduling units for June through December.

Don't miss the opportunity get your mechanics and operators "battery smart".
